Education

B.Tech in Computer Science and Engineering(Data Science) **2023 – Present**
SCMS School of Engineering and Technology ***CGPA : 8.2/10***

CBSE - XII(PCM) **2021 – 2022**
Jawahar Navodaya Vidyalaya ***84.2%***

Experience

Student Intern - Bravestudio inc. **27 Jan 2026 – 5 Feb 2026**
Matsue, Shimane, Japan (On-site)

- Contributed to the development of **Harasuma**, a healthcare tracking web application, using Ruby on Rails and MVC architecture.
- Participated in discussions around the background and formation of the project, while also brainstorming and discussing healthcare workflows and system processes to understand how the application could support users and operational needs
- Worked on routing, navigation flow, and controller logic to support page transitions and data updates.
- Collaborated with team members through feature branches and pull requests as part of the development workflow.
- Gained practical exposure to Ruby on Rails, Docker, Git, and Japanese collaborative development practices including Kaizen.

Projects

Smart Task Management System | *Python, Flask, PostgreSQL, Pandas, NumPy* **Link**

- Built a full-stack task management web app with user authentication (register, login, logout) using Flask
- Developed REST APIs for task CRUD operations with PostgreSQL and SQLAlchemy ORM for structured data storage
- Implemented real-time notifications using WebSockets (Flask-SocketIO) for live task updates without page refresh
- Created an analytics dashboard using Pandas and NumPy to track task completion rate and priority breakdown
- Designed a clean responsive UI using HTML, CSS and JavaScript and deployed the app live on Render

CampusMate | *Next.js, TypeScript, Tailwind CSS, React, Vercel* **Link**

- Developed a full-stack campus marketplace enabling students to buy, sell, and discover products and services within their college community
- Implemented secure user authentication and listing management using Supabase with a scalable backend architecture
- Built reusable React components using Next.js App Router and TypeScript to create maintainable, type-safe, and responsive interfaces
- Designed dynamic listing pages with category browsing, search functionality, and detailed product views using Tailwind CSS.
- Deployed the application on Vercel with GitHub integration for continuous deployment and production hosting

Flight Delay Prediction | *Python, Scikit-learn, Pandas, Jupyter Notebook* **Link**

- Built a machine learning model to predict flight delay status (on-time vs delayed) using a dataset of 15,000 records.
- Performed data preprocessing, including handling missing values, one-hot encoding, and feature selection.
- Trained and evaluated Logistic Regression, Decision Tree, and Random Forest models and compared their performance using accuracy metrics.

Technical Skills

Languages: Python, C, JavaScript
Developer Tools: VS Code, Git, GitHub, Vercel, Render, LaTeX
Frameworks/Libraries: Pandas, Numpy, ScikitLearn, MatplotLib, React.js, Node.js
Databases: MySQL, PostgreSQL

Achievements

- **International Internship:** Selected for the **San-In Japan Internship Program 2026**. Selected as Captain of a 6-member group for my Japanese speaking ability; delivered welcome speeches at Matsue City Hall and at the various official events before the Mayor of Matsue, program officials, university delegates, and company executives.
- **Project Showcase:** Selected to present group project at the college-level AI Day 2026
- **Japanese Language Certificate:** Beginner Level(150 Hours)

Languages

Fluent in English, Hindi, Malayalam, and Odia, with basic speaking proficiency in Japanese
